WHAT IS ORIGAMI?

Origami is the Japanese art of paperfolding in which pieces of paper, usually square in shape and uncut, are folded into decorative objects such as birds and animals. An ancient art that dates back to 538 A. D., origami has grown over the centuries from a craft used to make decorations for ceremonial occasions to an art form practiced by people of all ages and all nationalities. Today people from all walks of life, from schoolchildren to mathematicians, enjoy origami. These origami enthusiasts refer to themselves as paperfolders. They also use the terms origamists and origamians, although these terms are less popular. The decorative paper objects that they fold are referred to as folds or models.

Purpose

Workshop participants will learn the basics paper-folding, will learn to create birds, flowers etc...

Learning origami will teach you patience and precision.

- * You will learn to create a thing of beauty out of scraps of paper.
- * Origami will teach you mathematical principal.
- * You will be able to entertain friends by making birds and other basic origami shapes
